

Would you like to publish these books?

3 different series for pre-schools and early years

1) Simple machines

These 6 books with hard cover are inspirational children's stories about technology and science. They have been extremely well received in Sweden, and it has been a great success even financially. The authors are pre-school teachers and they have won several rewards for their work. Dummies with English translations are available. The reviews in the Swedish papers have been very positive and here is a quote translated into English:

"...The illustrations are charmingly simple and make you think of animated movies such as Disney's Cars or popular characters from children's books like Bob the Builder all drawn with big and expressive eyes. Even the text is very stripped and admirably brief so the message is clear - by taking advantage of each other's knowledge and using the technical characteristics you can come very far together. It is noted that the authors Mattias Blomfeldt and Therese Karlsson, both active pre-school teachers, have a great knowledge about young children's concepts. They have truly succeeded in creating a storytelling that whets the appetite."

Piroska Bakran for the Swedish library magazine.

2) Simple arithmetic

Easy and educational stories that explain the fundamental of the the four arithmetic methods.

In this series you will meet PLUS who always wants to add things that he finds in the garden. MINUS - the thief - always looking for things to steal.

MULTIPLY is the smart one who finds a new way to catch more fish using a net. DIVIDE is always very aware that everything much be shared equally. And finally CONSTABLE EQUAL who supervises all of the other characters and mediates when there are different views. Dummies with English translations are available.

3) Renewable energy sources

This is our newest series with 5 books showing and explaining different renewable energy sources for children. The main characters are the MOTOR and the BATTERY and they always set out for different adventures. However the Battery needs to be recharged and here the different energy sources become their rescue. In these books you will meet the SOLAR PLANT, WIND POWER, HYDRO POWER, WAVE POWER and the SOLAR PANEL.

We are now looking for foreign publishers who would like to publish these books in other languages. There is a minimum of text in the books and the lovely drawings often speak for themselves. All of the books have 28 pages with 175 X 175 mm in the Swedish version, but of course you are free to choose other formats.
